

Crisp audio is sent directly to the ear. Using headphones, the Duett functions as an alternative to hearing aids. For hearing aids with a built-in T-coil, a neckloop creates a seamless connection.

Three different sound modes make it easy to find your ideal setting.

Big, simple volume buttons.

Easy to adjust the left/right sound balance.

Rechargeable batteries last around 20 hours.

Ready to go after 3 hours charging.

Weighs just 0,1 lbs has a stylishly modern look and is smaller than most mobile phones.

COMFORT DUETT

Connect with the world at the touch of a button

When every word is loud and clear, you can participate in life with confidence. The Comfort Duett is an easy-to-use hearing amplifier that helps you get more involved in almost any situation, whether you're at a lively family dinner, chatting on the phone or watching TV. Clever technology inside the Comfort Duett catches important sounds, like people's voices, and sends loud, crisp audio to either headphones or a hearing aid. And with its compact design, it discreetly tags along anywhere you go.

Plug in and hear life like never before.

Face-to-face

The Comfort Duett tags along wherever you might have trouble hearing what people are saying. That could be anywhere from the dinner table or at a café, to the doctor's office or the theatre. Just set it on a table or clip it onto your shirt and you're ready to go.

On the phone

The telephone kit makes it easy to amplify phone calls by connecting your landline phone to the Comfort Duett through its charging dock.

Hear all sorts of media

The TV kit turns the Comfort Duett into a TV amplifier via the charging dock. Other accessories help you listen to the radio, hear media from your computer or connect to almost any other source.
