

CIBS AUDIO

Crystal clear and lip synchronized sound, wireless from your TV/Home entertainment

If you find it difficult to hear TV sound without disturbing others, CIBS AUDIO is the perfect solution for you!

CIBS AUDIO is a ready-paired solution for audio equipment at home or at work so that you don't have to worry about connection/pairing. The solution consists of an Audiostreamer (transmitter) and a receiver (neck loop with headset). The wireless streamer connects to the relevant audio equipment such as TV, radio, MP3 player etc. The Audiostreamer transfers the sound via Bluetooth and directly to the wireless neck loop so that you get the sound directly into your hearing aid(s) / CI or headset. With the use of the latest technology, the sound transfer is lip synchronized, which is essential for a positive sound experience. The Audiostreamer can also be connected to an alarm system if it has line-out. If doorbells, smoke alarms or other alarms go off, the Audiostreamer will automatically turn off the sound on the audio unit you are listening to, and you will receive an alarm from the warning device directly into the hearing aid(s) / CI or headset.

- Lip synchronized transfer of audio equipment such as TV, radio etc.
- Possibility to connect alerting system so that you are aware of doorbells, smoke alarms etc.
- Simple connection of up to 4 audio units in addition to the alerting system.

The optimal solution for TV and other sound sources

- Very easy to use
- Active noise reduction
- Stepless- volume control
- Range: up to 70 meters
- Rechargeable battery on CIBS Neck Loop
- Eavesdrop secure
- Simple connection
