

CIBS OFFICE

Wireless telephony at work for mobile- and desk telephones

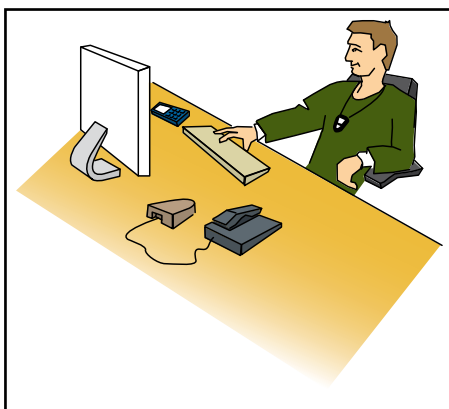

Many people who are hard of hearing find it difficult to keep up with a demanding routine filled with telephones, conversations with clients and colleagues and the use of audio equipment. CIBS OFFICE consists of a multifunctional Tango Bluetooth amplifier and a Maestro Communicator neck loop. It provides a wireless solution that covers the various needs that a person who is hard of hearing may have at work.

CIBS OFFICE gives you the possibility of wireless amplification of mobile-, cordless- and desk phones. Digital signal processing and the possibility of high-quality sound for both ears means that speech recognition and easier handling of telephone conversations again become a reality.

The advantage of Tango Bluetooth is that you can still use the same telephone as your colleagues and keep all the functions you have by using system telephony at work. Most of the desk telephones do not have Bluetooth, so by connecting to Tango Bluetooth you get sound transmitted wirelessly through the Maestro Communicator. If you use mobile phones or wireless phones with Bluetooth, you will receive the telephone sound directly through Maestro.

By purchasing a handset lifter (accessory), it is possible to be notified about and to carry out a phone conversation up to 50-70 meters from the desk phone.

- Digital signal handling provides you with the latest technology within speech recognition and flexibility
- Separate volume and tone adjustment, with LED light that remembers the last setting on each function
- Simple connection and calibration of Tango Bluetooth
- Fits most types of telephones
- Remarkable range: up to 70 meters from Tango Bluetooth

 Bluetooth®

Wireless solution for your mobile and desk phone

- Very easy to use
- Integrated speech and audio amplifier
- Active noise reduction
- Stepless volume control
- Rechargeable battery on Maestro Communicator
- Security against tapping
- Simple connection
- No Channels (Like FM)

Art.No: 108-111

COMMidt®

Conversations with colleagues, clients and at meeting are often challenging in noisy and busy areas. The Maestro Communicator has a built-in speech amplifier which transfers the wireless digital sound from your dialogue partners. For larger meetings and distances, it may be a good idea to use a Bluetooth microphone such as Allegro or Liberto (see accessories) to ensure that the distance between the sound source and the noisy surrounding is not a problem.

CIBS OFFICE amplifies audio equipment e.g. PC, radio, CD/MP3 players, so that you can enjoy wireless music or PC-sound with crystal clear sound without disturbing others.

- Gives very good and high sound quality. Suitable for all types of hearing aid(s) / CI and hearing losses
- Very suitable for individual adapting and adjusting of workplace
- Choice of Telephone, Neck Loop/Headset and Dialogue functions
- Separate volume and tone adjustments for all functions
- Integrated voice amplifier (Dialogue)
- Adjustable microphone sensitivity
- Simple configuration for most telephones at home and at work
- Stylish design, flexible and easy to use!

Inclusive:

Maestro, Tango VII, USB cable, clips, connection cable (cable between Tango VII and the telephone) and international charger

Accessories:

Product #	Product Name	Product Description
