

TANGO VII

Multifunctional Bluetooth amplifier for desk telephones

Since the beginning in 2005, the Tango amplifier series has been very popular and practically a reference point within multifunctional amplifiers for desk telephones.

The Tango amplifier is now launched with Bluetooth 2.0 so that now it can also work with Maestro Communicator (CIBS OFFICE). This provides opportunities to use Tango's unique sound quality, flexibility and user friendliness wireless and hands-free.

A Tango Bluetooth with a Maestro Communicator allows you to control both your desk-, cordless- and mobile phone from one unit in a way that hard of hearing people have never been able to do before!

By purchasing a handset lifter (accessory), you can be notified about and carry out a telephone conversation up to 50-70 meters from the desk telephone. It is very flexible and effective in many situations!

You can also connect a Bluetooth headset to Tango Bluetooth. This is a very flexible solution if you wish to work hands-free without using a hearing aid/CI or a neck loop. This solution is also ideal for normal hearing people that have a need for extra sound in noisy and busy office environments, for example in an open office landscape.

- Digital signal handling provides you with the latest and best technology within speech recognition and flexibility
- A multifunctional amplifier that can easily be used by friends and the entire family, both people with normal hearing and people who are hard of hearing
- Separate volume- and tone adjustment, with LED light that remembers the last setting
- Simple connection and calibration of Tango Bluetooth

 Bluetooth®

**Wireless
service of your
desk phone**

- No batteries
- Elegant design
