

Wireless Smart Phone Transmitter

Model SP100T

Our wireless transmitter connects your smartphone to the MyAlert™ remote receiver for amplification, sight and even vibration to alert you to calls, text messages, email and all the functions you designate on your phone. Setup is a breeze, simply install 2 AAA batteries and follow our 2 step easy to pair setup, and that's it. The phone's ring or vibration is detected and a signal is sent to the receivers. MyAlert receivers will alert you with your choice of loud sound, bright flashing LED's and our powerful bed shaker. An attractive design to match any décor, the SP100T has three levels of adjustable sensitivity (hi, med, lo) so you can dial in the level that works best for you. Never miss another call, text or other push notification again - you'll always be connected. Built with safe and secure supervision, extended range, and million-code technology, this transmitter is designed to perform as well as, if not better, than competitors' units that cost considerably more.

Features:

- Transmits a wireless signal to all MyAlert remote receivers when the microphone detects the ringer or vibration (phone must be set to ring or vibration)
- Clear and loud adjustable sound, up to 95 decibels of extra loud sound
- Three sound sensitivity levels (hi, med, low)
(Most phones set to vibration will need to be set to the hi position)
- Powered by two (2) AAA batteries (not included)
- Supervised low battery warning on receiver
- Transmitter range reaches any area of your home even back yards
- One-Year MyAlert warranty
- MSRP only \$39.95

Also works with:

- Intercom systems
- Smartphones
- Kitchen alarms
